DESCRIPTION:

A synthetic peptide that irreversibly inhibits activity of caspase-8 and related caspases and blocks apoptosis. The inhibitor is designed as a methyl ester to enhance cell permeability. The conjugation with biotin allows detection of activated caspases in conjunction with avidin-tags.

RECOMMENDED USAGE:

We recommend using 1000X dilutions for inhibiting or binding to activated caspases (e.g., Add 1 µl to 1 ml of culture medium). However, the optimal doses should be determined individually.

FOR RESEARCH USE ONLY! Not to be used in human.
