

Protein A/G-Biotin

CATALOG #:	6506-01	100 µg
	6506-1	1 mg
LOT #:	_____	
SOURCE:	Recombinant expressed in <i>E. coli</i>	
PURITY:	>98% by SDS-PAGE and HPLC analyses Endotoxin level is <0.1 EU/mg of Protein A/G	
MOL. WEIGHT:	59.7 kDa	
FORM:	Lyophilized	
RECONSTITUTION:	Reconstitution in water to a concentration of 5 mg/ml gives a clear solution.	

STORAGE CONDITIONS:

Store at -20°C. After reconstitution, aliquot and store at -20°C. Avoid repeated freezing and thawing.

PREPARATION:

Protein A/G is a genetically engineered protein that combines the IgG binding profiles of both Protein A and Protein G. It is a gene fusion product. Recombinant fusion protein A/G contains 6x His-tag on the N-terminus, five Ig-binding regions of protein A fusion with three Ig-binding region of protein G. Cell wall binding region, albumin binding region and other non-specific binding regions have been eliminated from the fusion protein A/G to ensure the maximum specific IgG binding. 6x His-tag on N-terminus can be used for affinity purification or for protein A/G detection using anti-His-tag antibody.

Protein A/G binds to all IgG subclasses from various mammalian species, including all IgGs that bind to both Protein A and Protein G, making it the ideal choice for purification of all kinds of polyclonal or monoclonal IgG antibodies.

Protein A/G-Biotin is prepared by conjugating recombinant Protein A/G to Biotin. The conjugation was optimized to provide the maximal binding capacity for IgG.

SPECIFICITY:

Under optimal conditions, 1 mg protein A/G will bind approximately 5 mg human IgG. Optimal binding of Protein A/G to antibodies occurs at pH 5.0 to 8.0 and can be eluted over a pH range of 2.5 to 3.0.

FOR RESEARCH USE ONLY! NOT TO BE USED IN HUMAN SUBJECTS.
