

## Fraction-PREP™ Cell Fractionation System

A comprehensive selection of Fraction-PREP™ kits are provided for convenient fractionation of cellular proteins into distinct subcellular groups. These kits provide unique formulations of buffers and reagents for convenient preparation of highly enriched cellular fractions from mammalian cells and tissues. The prepared protein fractions are suitable for downstream assays, such as two-dimensional gel, protein immunoblotting, gel-shift assay, enzyme activity assays, reporter assays, and more.

### **Mitochondria/Cytosol Fractionation Kit**

Separate highly enriched mitochondria from cytosol of mammalian cells. Simple procedure with no ultracentrifugations or toxic chemicals involved. Mitochondrial DNA Isolation Kit is also available.

### **Nuclear/Cytosol Fractionation Kit**

Separate nucleus from cytoplasm in less than 90 minutes. The kit provides a system that maintains the nuclear and cytosol compartments separated. The separated fractions are suitable for downstream assays.

### **Membrane Protein Extraction Kit**

Isolate integral membrane and/or plasma membrane proteins efficiently from cultured mammalian cells. The isolated membrane proteins can directly be used in downstream assays.

### **Cytosol/Particulate Rapid Separation Kit**

Separate cytosol and particulate fractions so rapidly, even before the small molecules begin to diffuse. The rapid procedure provides unique tools for tracing and localizing both small and large molecules in separated fractions.

### **Mammalian Cell Extraction Kit**

Extract mammalian proteins from tissues and cells under nondenaturing conditions. Cell extracts can be used in a variety of assays, such as enzyme activity assays, Western blot, and others.

### **Fraction-Prep™ Cell Fractionation System**

The Fraction-PREP™ Cell Fractionation System is designed to fractionate cellular proteins into four distinct protein fractions: Cytosolic fraction, membrane fraction, nuclear fraction, and cytoskeletal fraction. All four protein fractions can be directly used in downstream assays, such as 2-D gel, Western blot, gel-shift assay, translocation, enzyme activity assays, and reporter assays, etc.

<b>Product Name</b>	<b>Catalog #</b>	<b>Size</b>
Nuclear/Cytosol Fractionation Kit	K266-25/100	25/100 assays
Mitochondrial/Cytosol Fractionation Kit	K256-25/100	25/100 assays
Mitochondrial DNA Isolation Kit	K280-50	50 assays
Cytosol/Particulate Rapid Separation Kit	K267-50	50 assays
Membrane Protein Extraction Kit	K268-50	50 assays
Mammalian Cell Extraction Kit	K269-100	100 assays
Fraction-PREP™ Cell Fractionation System	K270-50	50 assays
