

Glucose

Glucose is without a doubt, the most important sugar in mammalian metabolism. Glucose serves as a vital energy source for many organisms, including plants and animals. BioVision offers the most complete series of assays kits aimed to measure this sugar, metabolites and other enzymes involved in its metabolism.

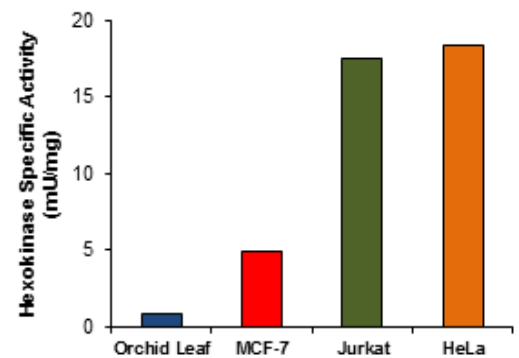

Key Features:

- **Non-radioactive**, homogeneous assays
- **Specific** assays
- **Convenient**: minimal sample preparation; fast protocols (1-2 hours)
- **Cost effective**: 50/100 assays; High Throughput Screening compatible
- **Validated**: using mammalian tissues, cells, biological fluids

Figures. A) Glucose concentration in human urine and serum was estimated using K606-100. B) Hexokinase activity in various samples (orchid leaf, MCF-7, Jurkat and HeLa cell) was determined using K769-100. C) Flow Cytometry histograms, using K681-50 showing the inhibition of glucose uptake by phloretin in Jurkat cells (**Black**: negative control cells; **orange**: in the presence of phloretin; **blue**: without phloretin). D) 1,5-AG uptake in HeLa cells using K684-50: HeLa cells showing the uptake of AGTrackerTM Reagent in the cytoplasm. Cells were stained with AGTrackerTM Reagent for 30 min. and fixed. Image was taken using a fluorescent microscope with a 60X oil objective lens.
