

Krebs Cycle

The Krebs Cycle, also known as Tricarboxylic Acid (TCA), is considered one of the central pathways in cellular metabolism. It oxidizes several metabolites containing acetyl groups. The list includes amino acids, carbohydrates and fatty acids. BioVision offers the most complete series of assays measuring various metabolites, cofactors, and enzymes involved in the glycolytic pathway.

Key Features:

- **Non-radioactive**, homogeneous assays
- **Specific** assays
- **Convenient**: minimal sample preparation; fast protocols (1-2 hours)
- **Cost effective**: 100 assays; **High Throughput Screening compatible**
- **Validated**: using mammalian tissues, cells, biological fluids
