

NFκB p65 Polyclonal Antibody

| | | |
|----------------------------|---|--------------------|
| CATALOG NO: | 3038-30T | 30 µg (Trial size) |
| | 3038-100 | 100 µg |
| HOST: | Rabbit | |
| IMMUNOGEN: | Synthetic peptide surrounding amino acid 274 of mouse NFκB p65 (ID# BV-129) | |
| SPECIES REACTIVITY: | Human, Mouse, Rat | |

FORMULATION:

0.2 mg/ml affinity purified rabbit anti-NFκB polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 25% glycerol, 0.5% BSA, 0.01% thimerosal.

STORAGE CONDITIONS:

Store at -20°C. For long-term storage, aliquot and freeze at -70°C. Avoid repeated freeze/thaw cycles.

BACKGROUND:

NFκB is a heterodimer that consists of a 50 kDa DNA binding subunit (p50) and a 65 kDa transactivation subunit (p65/RelA). Both of these subunits exhibit sequence homology to the protooncogene c-Rel. The p50 has an isoform called p49/p52, and both proteins are derived from the amino-terminal of precursor protein p105 and p100. The p50/p65 heterodimer remains in the cytosol in an inactive form as a complex with its inhibitor, IκB. Upon stimulation of cells by a wide variety of stimuli such as lipopolysaccharide (LPS), pro-inflammatory cytokines (IL-1 & TNF, etc.), and viral infection, IκB is phosphorylated and degraded by proteasome. The active NFκB heterodimer is translocated into the nucleus and induces gene expression.

SPECIFICITY:

The antibody detects primarily NFκB p65 in samples of human, mouse, and rat origins.

APPLICATIONS:

The antibody can be used for Western blotting (0.5-4 µg/ml). Based on researchers feed back, it also works well in immunocytochemistry (10-20 µg/ml). However, the optimal conditions should be determined individually.

FOR RESEARCH USE ONLY! Not to be used on humans.
