

Recombinant mCherry Fluorescent Protein

CATALOG #:	4993-100	100 µg
	4993-1000	1 mg
	4993-5000	5 mg
SOURCE:	<i>E. coli</i>	
PURITY:	≥97% by SDS-PAGE and HPLC	
ENDOTOXIN:	≤0.1 ng/µg	
FORM:	Freeze Dried	
Reconstitution:	Reconstitute with dH ₂ O to 1 mg/ml	
STORAGE:	Store lyophilized protein at -20°C. For long-term storage, aliquot and store at -80°C.	

DESCRIPTION:

mCherry is the second generation monomeric red fluorescent protein that have improved brightness and photostability. The recombinant mCherry is expressed and purified from transformed *E. coli* using a method that ensures high purity and maximal fluorescence intensity. The protein is a 28.8 kDa monomer with 256 amino acids, pI: 6.23. Ex.= 587 nm (540-590 nm); Em.= 610 nm (550-650 nm). The protein is engineered with 6xHis-tag on the N-terminus, which can be used for detection with anti-His-Tag antibody (BioVision Cat # 3998-100) or protein purification/removal by using Ni⁺⁺ beads.

mCherry PROTEIN SEQUENCE:

APPLICATIONS:

The protein is suitable as a positive control for mCherry protein expression studies or as a labeling reagent. Applications include: Use as standards for SDS-PAGE, Western blot analysis of mCherry transfected cells, label other proteins or antibodies, calibration of fluorometers and flow cytometers, fluorescence microscope, or microinjection of mCherry protein into cells and tissues, etc. The recombinant mCherry protein is ideal for fusion tag applications and is perfect for triple labeling with EGFP (Cat.# 4999-100), CFP (Cat.# 4994-100), YFP (Cat.# 4998-100), or any other dyes. The 6XHis-Tag on the N-terminal can be used in Western blot detection with 6XHis-tag antibodies (BioVision Cat # 3998-100). The 6XHis-tag can also be used in removal or purification of the mCherry protein.

FOR RESEARCH USE ONLY! Not to be used on humans.
