DESCRIPTION: This gene encodes a nuclear protein which is involved in cell cycle regulation. The encoded protein is a ubiquitin ligase capable of ubiquitinating PCNP (PEST-containing nuclear protein), and together they may play a role in tumorigenesis. The encoded protein contains an NIRF_N domain, a PHD finger, a set- and ring associated (SRA) domain, and a RING finger domain and several of these domains have been shown to be essential for the regulation of cell proliferation. This protein may also have a role in intranuclear degradation of polyglutamine aggregates. Alternative splicing results in multiple transcript variants, some of which are non-protein coding. [Provided by RefSeq, Feb 2012].

SPECIFICITY:	Cross reacts with human samples.
APPLICATION:	Western blot: 1:500 – 1:2000, IHC: 1:50 – 1:200, IF: 1:20 – 1:50.
