DESCRIPTION: Receptor for R-spondins that potentiates the canonical Wnt signaling pathway and acts as a stem cell marker of the intestinal epithelium and the hair follicle. Upon binding to R-spondins (RSPO1, RSPO2, RSPO3 or RSPO4), associates with phosphorylated LRP6 and frizzled receptors that are activated by extracellular Wnt receptors, triggering the canonical Wnt signaling pathway to increase expression of target genes. In contrast to classical G-protein coupled receptors, does not activate heterotrimeric G-proteins to transduce the signal. Involved in the development and/or maintenance of the adult intestinal stem cells during postembryonic development.

Western blot and Flow Cytometry analysis of LGR4 using anti-LGR5 antibody. (Left) Western blot analysis in mouse skeletal muscle lysate, rat skeletal muscle lysates, HeLa cell lysates, HepG2 cell lysate and SH-SY5Y cell lysates. LGR5 (arrow) was detected using the purified antibody. (Right) Overlay histogram showing SH-SY5Y cells stained with anti-LGR5 antibody (green). Isotype control antibody (blue) was rabbit IgG used under the same conditions. Acquisition of >10, 000 events was performed.
