SPECIFICITY: Cetuximab is a recombinant, human/mouse chimeric monoclonal antibody that binds specifically to the extracellular domain of the human epidermal growth factor receptor (EGFR). Cetuximab is composed of the Fv regions of a murine anti-EGFR antibody with human IgG1 heavy and kappa light chain constant regions and has an approximate molecular weight of 152 kDa. Cetuximab is produced in mammalian (murine myeloma) cell culture.

DESCRIPTION: Cetuximab is a recombinant human/mouse chimeric epidermal growth factor receptor (EGFR) monoclonal antibody. Epidermal growth factor receptor (EGFR) is a receptor found on both normal and tumor cells that is important for cell growth. Cetuximab is an EGFR inhibitor, used to treat cancer by blocking the activity of EGFR and keep cancer from growing. Cetuximab can form a bridge that trigger an immune response by binding to the EGFR on the tumor cells. It is used for the treatment of EGFR-expressing, metastatic colorectal cancer.

APPLICATION: Neutralization: 0.1-20 µg/ml, ELISA: 2 µg/ml
