**Fig A:** A sandwich ELISA was performed using 02H06 or 03A03 as capture and 10B12-biotin as tracer. Cystatin C purified from human urine was spiked into sample diluent and serially diluted from 3.12 ng/ml to 0.025 ng/ml

**Fig B:** A sandwich ELISA was performed using normal human serum as the sample to demonstrate that the two matched pairs are able to detect Cystatin C present in serum. The data indicates that both matched pairs are able to detect and measure Cystatin C in the serum matrix.
