

ToxOut™ Endotoxin-free Glass Vial (Amber)

11/18

Cat. No.

M7948-2 ToxOut™ Endotoxin-free Glass Vial (Amber), 2 ml x 10 Vials

M7948-10 ToxOut™ Endotoxin-free Glass Vial (Amber), 10 ml x 10 Vials

I. Description:

Endotoxin is the lipopolysaccharide (LPS) complex located in the outer membrane of gram-negative bacteria. During experimental procedures, large amount of endotoxins are shed and can easily contaminate labware, buffers and downstream products. Presence of endotoxin in any of these has a detrimental effect on culturing of cells and can lead to generation of irreproducible or negative experimental data. Therefore, it is critical to avoid endotoxin presence from samples and products. **ToxOut™ Endotoxin-free Glass Vials (Amber)** are sealed individually with tear-out aluminum ring and are recommended for storing and handling of samples with special requirement of endotoxin level (< 0.05 EU/ml).

II. Storage and Handling:

- Store at room temperature.
- Open the aluminum ring right before using.
- Handle ToxOut™ Endotoxin-free Glass Vials with extra caution to prevent endotoxin contamination from dust, solution or dirty labware in endotoxin-free environment.
