

PPAR γ , Human Recombinant

CATALOG NO:	P1120-10	10 μ g
ALTERNATE NAMES:	Peroxisome proliferator-activated receptor gamma, PPAR-gamma, PPARG, NR1C3, PPARG1, PPARG2	
SOURCE:	<i>E.coli</i> (GST tag)	
FORM:	Liquid (Sterile Filtered solution)	
MOLECULAR WT:	PPAR γ Human Recombinant encoding amino acids 1-477 expressed in <i>E.coli</i> , is fused to a GST tag and it is antibody reactive. The protein has calculated MW with GST tag is 80 kDa	
CONCENTRATION:	0.1 mg/ml	
FORMULATION:	In 50 mM Tris-HCl and 10 mM L-glutathione (reduced).	
STORAGE CONDITIONS:	Store vial at -20°C to -80°C. When stored at the recommended temperature, this protein is stable for 12 months. Avoid multiple freeze-thaw cycles.	

DESCRIPTION

Peroxisome proliferators are non-genotoxic carcinogens which are purported to exert their effect on cells through their interaction with members of the nuclear hormone receptor family termed peroxisome proliferators activated receptors (PPARs). Nuclear hormone receptors are ligand-dependent intracellular proteins that stimulate transcription of specific genes by binding to specific DNA sequences following activation by the appropriate ligand. Studies indicate that PPARs are activated by peroxisome proliferators such as clofibric acid, nafenopin, and WY-14,643, as well as by some fatty acids.

APPLICATIONS: ELISA, Inhibition Assays, Western Blotting
