

Human CellExp™ SARS-CoV-2 Nucleoprotein, Recombinant

CATALOG NO: P1554-10 10 µg
P1554-50 50 µg

ALTERNATE NAMES: Nucleoprotein, Nucleocapsid protein, NC, N, NP, NC_045512.2, GU280_gp10, ORF9 structural protein, nucleocapsid phosphoprotein

MOL. WT. 46 kDa (6xHis tag at the C-terminus)

SOURCE: HEK 293 cells

PURITY: >95% SDS - PAGE

FORM: Lyophilized

FORMULATION: Lyophilized from 0.22 µm filtered PBS (pH 7.4) with 5% trehalose

RECONSTITUTION: Centrifuge the vial prior to opening. Reconstitute in sterile PBS (pH 7.4). Do not vortex

STORAGE CONDITIONS: Store at -20°C. Once reconstituted, aliquot and store at -20°C or -70°C. Avoid repeated freezing and thawing cycles.

DESCRIPTION: Severe acute respiratory syndrome (SARS) is a viral respiratory illness caused by a coronavirus called SARS-associated coronavirus (SARS-CoV). SARS coronavirus belongs to a family of enveloped coronaviruses. Coronaviruses are enveloped, single-stranded, positive-sense RNA viruses that belong to the subfamily Coronavirinae. The coronavirus genome encodes a spike protein (S), an envelope protein, a membrane protein, and a nucleoprotein in this order. Nucleoprotein packages the positive strand viral genome RNA into a helical ribonucleocapsid (RNP) and plays a fundamental role during virion assembly through its interactions with the viral genome and membrane protein M. It also plays an important role in enhancing the efficiency of subgenomic viral RNA transcription as well as viral replication.

AMINO ACID SEQUENCE: Ser 2 – Ala 419

SDS-PAGE (4-20%) of Recombinant SARS-CoV-2 Nucleoprotein: 3 µg of recombinant nucleoprotein is loaded under reducing (R) condition and stained with Coomassie Blue.
