

EZSolution™ Ready-to-Use Products

Biovision is excited to present its extensive collection of ready-to-use small molecule stock solutions with known concentrations. These EZSolution products can be simply diluted in the aqueous buffer of choice for a wide variety of in-vitro and in-vivo applications. No more cumbersome Molarity calculations or having to weigh small amounts of often- times, hazardous, solid products. You don't even need to find the dry solvent (DMSO or Ethanol) of molecular grade purity to prepare a stock solution within the limit of solubility for a particular chemical. The EZSolution line of products offers ultimate convenience and flexibility. Some products are sterile filtered so that they can be used directly for cell/tissue culture experiments.
